Art Unit: 3736

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 29-46 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 29-46 are non-statutory in that claim 29, as amended recites that the signal line is connected to the body ground of the patient. This recites a positive relationship to the human body. The human body is non-statutory subject matter and cannot be positively recited. As such, the claim is non-statutory. Applicant should amend the claim to recite that the common line is adapted to connect body ground to ...

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 29, 31, 32, and 40-46 are rejected under 35 U.S.C. 102(b) as being anticipated by the Papathanasiou article entitled "An implantable CMOS Signal " (hereinafter Papa). Papa shows a circuit receiving a signal from a nerve on a common line that passes through a filter to 2 amplifiers (see p. v-238, left column, line 30), where the amplifiers have a differential mosfet transistor arrangement, M1 and M2. This arrangement has a "low" input current and functions as a first protection circuit. The system further includes a line connectable to body ground, through the resistor located

between the capacitor and the amplifier input. In addition, since the circuit is used for the identical purpose as the current circuit, it would have the same operating parameters, recited in claims 40-46.

Claims 30 and 33-39 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claim 30 defines over the art of record in that none of the art has the current mirror, as claimed. Claim 33 defines over the art in that none of the art has the DC restoration circuit. Claims 34-39 define over the art of record in that none of the art has the band pass amplifier, as recited.

Applicant's arguments filed 11/8/2004 have been fully considered but they are not persuasive.

Applicant has asserted that there is not a second protection circuit as recited in the claim. The examiner notes that the AC coupling stage to the left of the amplifier in figure 2 meets the claim limitation as to the second protection circuit.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Application/Control Number: 09/988,112 Page 4

Art Unit: 3736

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert L. Nasser whose telephone number is (571) 27:2-4731. The examiner can normally be reached on Mon-Fri, variable hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Max Hindenburg can be reached on (571) 272-4726. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
